

7.2.4 Release Notes

Overview

Version 7.2.4 includes updates and fixes to the Work Manager mobile app, as well as general bug fixes to the AgileAssets asset management system application platform.

Supported Third Party Applications and Versions

[.Supported Platforms and Third Party Applications for Version 7.2.4 v7.2](#)

New Features and Enhancements

Work Manager

- Enable Work Order Editing
- Smart Sync – Reduced Sync Time by 80%
- Active Directory Integration

Dropped/Replaced Features

- N/A

Bug Fixes and Other Improvements

- Updated: The calendar widget was updated to simplify its usability. Simply picking a date on the widget, closes the widget and updates the underlying field with the selection
- Updated: The 'Save Data' and 'Retrieve Data' buttons in the application were renamed to 'Save' and 'Reload' respectively
- Updated: The menu option 'Set bookmark location' on a grid or tree view of a window was renamed to 'Tag record'
- Fixed: Issue in the work manager mobile app, where the cursor is placed at the beginning of a field when attempt to edit the contents of a field
- Fixed: Issue in materials management, where the management unit a user is logged into is displayed, rather than the management unit previously selected by the user
- Fixed: Issue in fleet and equipment manager, where the equipment inquiry window was defaulting to blank rather than equipment name
- Fixed: Issue in fleet and equipment manager, where an erroneous check for stock levels is performed when completing a multi-vehicle repair order
- Fixed: Issue in maintenance management, where successive parent projects could not be specified and propagated to child admin units, when creating an in-house project
- Fixed: Issue in maintenance management, where asset types or activities defined for a contractor in the setup window are not retained, when select to edit a selection
- Fixed: Intermittent issue in maintenance management, where the prior contents of the work order comments field is overwritten when the user scrolls the screen
- Fixed: Issue in facilities management, where sites or buildings or facilities activities defined for a contractor in the setup window are not retained, when select to edit a selection
- Fixed: Issue in GIS Explorer, where a user's AOI definition, crop setting and global filter definition are not retained across multiple sessions for the user
- Fixed: General issue where the formatting on reports is not retained when a report is emailed
- Fixed: General issue for maps bound to a data window, where the feature's gis information on the map is not updated to reflect updates made on the data window

Known Issues, Limitations & Restrictions

- The new GIS Interface like all web mapping applications requires datasets in the geographic coordinate system (EPSG:4326), so customer schemas with data stored in a different coordinate system would need to be transformed in order for map layers to be created from the dataset.
- Inserting a location or inventory item from a map is not functional when using Firefox as your web browser. To work around this limitation, use the other supported web browsers: IE 11, Chrome or Safari
- When you select to print a map as an image (png file) whilst using Firefox as your web browser, the file is downloaded as map.png.pdf. You would have to manually edit out the '.pdf' extension from the file name, after the file has been downloaded, to be able to open/use the file
- When you define a map print template of size 34x44 or larger, an error is returned since the size of the generated map image always times before a pdf for printing is generated
- While working on the GIS Interface and performing tasks that does not generate a request to the server (such as styling a map), your user session may expire as a result. The configured session expiration warnings will be displayed when this occurs or your session may timeout and a session expiration notification displayed, if a warning is not configured
- Map filter value does not get pre-populated in the Jasper report print template, even though the parameter is specified for display in the template
- Map filter value cannot be defined or edited for a map with a specified area of interest. To work around the definition limitation, the map filter should be defined before the AOI is set
- A map's layer style settings become null and uneditable, when an applied filter is partially applicable or not applicable to the defined styling attribute values for the map
- On a map bound to a data window, some items when selected on the map aren't highlighted in the data window because they aren't present there (In a data window, items can be Access Regulated), but on the map all inventory items are displayed
- The loading and display of maps and associated styles in IE 11 is not as fast as Chrome, Firefox and Safari

- In the Roads & Highways interface, routes with curves are not handled properly by the ESRI FDGB API. A workaround is to have the agency densify the routes to turn the curves into line strings
- The HTML5 based copy/paste functionality has limitations on the number of rows that can be copied to a browsers clipboard
 - IE 11 - 4000 rows
 - Edge - 4000 rows
 - Chrome - 400 rows
 - Firefox - 1000 rows
 - IE or Edge on a Surface Tablet - 15 rows
- When you select to copy rows from a data window, data from hidden columns on the window are also copied to the clipboard
- The spinner indicating that a layer is loading in the GIS Explorer, continues to spin after selecting to remove a previous loading layer by using either the new map or remove layer option
- When zoomed in at the 0.6km/0.4m level before selecting to print a map, the basemap is not rendered on the resulting printed map
- Hebrew and other languages with special characters are not rendered properly on the properties panel of GIS Explorer
- GIS Explorer does not display the contents of the screen for a right to left language setting
- The owner of a GIS catalog folder no longer has access to the catalog, when the folder is shared by a GIS admin with administrative units that the owner of the folder does not belong to
- A map built from an image service is not rendered in the printed document (pdf or png) when select to print the map
- An image layer is not displayed on the map when change the basemap from the 'None' option to any other basemap option
- A map comprised of layers from multiple sources including an image service, does not display the layers in the correct z-order when the layers are re-ordered
- For some monitor resolutions, opening the messages dialog while the GIS Explorer window is open results in the messages dialog to be partially hidden
- In FDC, when enter an incorrect password twice and then enter the correct password afterwards, a message indicating an incorrect reCAPTCHA answer is displayed
- When the same editable layer is added to GIS Explorer so there are more than one active, the features on the layer cannot be dragged for an edit
- The undo/redo of edits retains the actions performed even the associated layer has been removed
- When add a new editable layer to a map with in-progress edits, the undo and redo options are temporarily disabled. Performing an edit re-enables undo/redo and previous edits can be undone or redone
- When a user a user enters an incorrect username or password in the Work Manager mobile app, an incorrect message 'Unable to connect to server' is displayed
- In Microsoft Edge, some admin units in the Admin Units dropdown on the inspection teams creation dialog, appear as actionable links
