

Material Code ID

Use the Material Codes ID window to define and maintain the list of materials used by your agency in road construction. The columns in this window provide the following information:

- **Material Code:** Shows the user-defined identification code for each material used in the construction and maintenance of roads in your network.
- **Layer Category:** Indicates the typical layer position of the material when used with other materials.
- **Color:** Shows the color assigned to the material. The assigned color can be changed by double-clicking the displayed color. This causes a new window to open with a color palette. Click the desired color and select **OK** to assign the color to the material.
- **Comments:** Allows you to enter additional information. Typically, this is a description of the material or what the ID code means.
