

Troubleshooting Pavement Configuration

Error: “Cannot run program, ..., Permission Denied”

Solution: System admin needs to give the right to run that cbc file on server.

Error: “Single-row subquery returns more than one row”.

Solution: all Treatment Priority values in Treatment Screen need to be unique.

Error: “There was an error assigning treatments to sections in the analysis from the Master Work Program. This is mostly likely caused by an overlap in the Master Work Program table. Please check your Master Work Program for overlapping projects in the same year”.

There are several possible reasons that may cause this error, including:

- Overlap in master work plan.
- Duplicated selection priorities in Treatment table.
- Duplicated PMS_SECTION_ID or overlapping in sections in NETWORK_MASTER, which leads to overlap in PMS_ANALYSIS_SCENARIO_WP.
